

CONTENTS OF A COMPLETE SECTION 401 CERTIFICATION APPLICATION

Section 401 Water Quality Standards Certification regulations (23 CCR §3856) define what constitutes a complete application.

§3856. Contents of A Complete Application.

A complete application shall include all of the following information and items:

- (a) The name, address, and telephone number of:
 - (1) the applicant, and
 - (2) the applicant's agent (if an agent is submitting the application).
- (b) A full, technically accurate description, including the purpose and final goal, of the entire activity.
- (c) Complete identification of all federal licenses/permits being sought for or applying to the proposed activity, including the:
 - (1) federal agency;
 - (2) type (e.g., individual license, regional general permit, nationwide permit, etc.);
 - (3) license/permit number(s) (e.g., nationwide permit number), if applicable; and
 - (4) file number(s) assigned by the federal agency(ies), if available.
- (d) Complete copies of either:
 - (1) the application(s) for federal license(s)/permit(s) being sought for the activity, or,
 - (2) if no federal applications are required, any notification(s) concerning the proposed activity issued by the federal agency(ies), or,
 - (3) if no federal notifications are issued, any correspondence between the applicant and the federal agency(ies) describing or discussing the proposed activity.

If no application, notification, correspondence or other document must be exchanged between the applicant and federal agency(ies) prior to the start of the activity, the application shall include a written statement to this effect.
- (e) Copies of any final and signed federal, state, and local licenses, permits, and agreements (or copies of the draft documents, if not finalized) that will be required for any construction, operation, maintenance, or other actions associated with the activity. If no final or draft document is available, a list of all remaining agency regulatory approvals being sought shall be included.

If the federal licenses or permits required for the activity include a FERC license or amendment to a FERC license, a complete copy of a draft application for the FERC license or amendment of the FERC license meeting the requirements of Subsection 4.38(c)(4) of Title 18 of the Code of Federal Regulations is required.

- (f) A copy of any draft or final CEQA document(s), if available, prepared for the activity. Although CEQA documentation is not required for a complete application, the certifying agency shall be provided with and have ample time to properly review a final copy of valid CEQA documentation before taking a certification action.

(g) The correct fee deposit, as identified in Section 3833 of this Chapter.

(h) A complete project description, including:

- (1) Name(s) of any receiving water body(ies) that may receive a discharge.
- (2) Type(s) of receiving water body(ies) (e.g., at a minimum: river/streambed, lake/reservoir, ocean/estuary/bay, riparian area, or wetland type).
- (3) Location of the activity area in latitude and longitude, in township/range, or clearly indicated on a published map of suitable detail, quality, and scale to allow the certifying agency to easily identify the area and water body(ies) receiving any discharge.
- (4) For each water body type reported under Subsection (h)(2) of this Section, the total estimated quantity of waters of the United States that may be adversely impacted temporarily or permanently by a discharge or by dredging. The estimated quantity of waters to be adversely impacted by any discharge shall be reported in acres and (for channels, shorelines, riparian corridors, and other linear habitat) linear feet, except that dredging estimates shall be reported in cubic yards.
- (5) The total estimated quantity (in acres and, where appropriate, linear feet) of waters of the United States, by type (see Subsection (h)(2) of this Section) proposed to be created, restored, enhanced, purchased from a mitigation or conservation bank, set aside for protection, or otherwise identified as compensatory mitigation for any anticipated adverse impacts. If compensatory mitigation is to be provided in some other form, that shall be explained.
- (6) A description of any other steps that have been or will be taken to avoid, minimize, or compensate for loss of or significant adverse impacts to beneficial uses of waters of the state.
- (7) The total size (in acres), length (in feet) where appropriate, type, and description of the entire project area, including areas outside of jurisdictional waters of the United States.
- (8) A brief list/description, including estimated adverse impacts of any projects implemented by the applicant within the last five years or planned for implementation by the applicant within the next five years that are in any way related to the proposed activity or that may impact the same receiving water body(ies) as the proposed activity. For purposes of this item, the water body extends to a named source or stream segment identified in the relevant basin plan.

While an application may be deemed complete per these regulations, the Regional Board can ask for information to clarify the proposed project and its potential impacts on water quality standards. The majority of the requirements for a complete application are self-explanatory; however, a few items may require additional clarification.

The Regional Board staff has determined that for item (b) the following information must be provided before the application is determined to be complete:

1. A hydrology report detailing the discharges (Q_{10} and Q_{100}) for pre- and post-construction.

The Regional Board staff has determined that for item (h)(1) the following information must be provided before the application is determined to be complete:

1. Identify whether or not the receiving water is within the San Jacinto Watershed. Please visit http://www.swrcb.ca.gov/rwqcb8/html/san_jacinto_watershed.html to view a map of the San Jacinto Watershed.

The Regional Board staff has determined that for item (h)(6), the following information must be provided before the application is determined to be complete:

1. A site map showing the location of the mitigation area in relationship to the impact area.
2. A figure showing the proposed plant layout and plant palette.
3. A discussion of beneficial uses (as defined in the Basin Plan) of the receiving water and downstream waters that will be lost or impacted through project implementation, and how the proposed mitigation will compensate for these losses/impacts.
4. A discussion of BMP maintenance and monitoring activities and duration, including the parties responsible for long-term maintenance of any BMP installed. In addition, if maintenance and monitoring will be provided through another agency/party, submit a letter from that agency/party demonstrating that an agreement for such long-term maintenance/monitoring has been or will be reached.
5. A conceptual mitigation plan prepared in accordance with Army Corps of Engineers' guidelines may be submitted in lieu of the above items for an application to be considered complete. However, all of the information detailed in items 1-4 above must be included in the conceptual mitigation plan.
6. For new developments within the San Jacinto Watershed, the following is required prior to initiating construction:
 - Coverage under Order No. 01-34, waste discharge requirements issued by the Regional Board for discharges of storm and non-storm water runoff during and after construction. (If coverage of the project under the State Board's General Construction Permit (Water Quality Order No. 99-08-DWQ) was obtained prior to January 19, 2001, then coverage under Order No. 01-34 is not required.)

This Order includes requirements for the submittal of the following:

- Proposed Storm Water Pollution Prevention Plan (SWPPP) containing detailed and site-specific BMPs to be implemented pre-construction and post-construction to mitigate water quality standards impacts. The SWPPP must detail the parties responsible for long-term maintenance of any BMP installed. The SWPPP must be approved by the Regional Board's Executive Officer prior to initiating construction.
- Proposed Monitoring and Reporting Program to determine whether discharges from the project are in compliance with requirements of Order No. 01-34 and to determine the effectiveness of the SWPPP in controlling pollutant discharges. The approved Monitoring and Reporting Program must be implemented concurrently with the commencement of construction activities.

If you are unsure of what is required for a complete application, please contact Adam Fischer, the 401 Coordinator, at (909) 320-6363.

A complete application for water quality standards certification need not contain unnecessarily duplicative information. If the copy of a federal application contains information requested in Section 3856, that specific information need not be provided elsewhere in the application provided that the application clearly indicates where all required information and items are to be found.
